

# Project Manager: Robotics

## About the company

We are Hovering Solutions, a steadily growing company headquartered in London. In our development hub in Madrid city, Spain, we are creating disruptive technology solving a major problem related to the inspection and 3D digitalization of indoor/underground infrastructure using Autonomous Flying Robots. We highly value the contribution of all team members to the decision-making process enabling them to drive the growth of our company. Hence, we strive to create the best possible working atmosphere making feel the team members comfortable as we are highly interested in a long-term relationship with each person we hire.

## About the position

Due to the novelty of our technology and its continuous progress, the coordination between development teams, business strategy and customer requirements is essential for the proper achievement of the company goals. We are looking for candidates bringing knowledge and experience in the coordination and alignment of strategies through different company departments. Although not directly involved in the deep-tech development, the position also requires technical knowledge in robotics, UAVs or similar fields. The good understanding of electronics, programming and mechanics is essential for the efficient evaluation and allocation of the required resources, necessary to achieve project's goals. The position also involves the seeking of new projects with customers, partners, and other kind of entities based on the analysis of business / use cases.

## Summary of the tasks

- Monitoring and reporting of development activities among the different company departments.
- Active seeking and analysis of new projects with customers; use/business case analysis, technical feasibility assessment and deployment/implementation tracking.
- Coordination of activities among different projects, finding synergies with other involved parties, detecting overlaps with other on-going activities, therefore helping the optimization of company resources and its performance.
- Tracking of project activities scope, schedule deviations and cost reporting.
- Attend to relevant events, meetings with customers, exhibitions, and congresses (national and international travelling is required).

## Qualifications and skills

- Master's Degree or equivalent education in Electronics, Mechanics, Aeronautical, Computer Science or similar technical degree (mandatory). Additional education in PM or other management disciplines will be positively evaluated.
- At least, 3 to 5 years of proven experience in a similar position.
- Experience in deep-tech companies or high innovative challenging projects (mandatory).
- Experience in project management software/applications such as Microsoft Project or similar.
- Knowledge in robotics/drones and/or similar technology will be highly valuable.
- Fluent English skills orally and written (C1 or higher).
- European driving license.
- Willingness to travel national and internationally for short periods.
